

NB3LE-AFD

Arc fault detection circuit-breaker
with residual current operated function

NB3LE-AFD

1. General

1.1 Function

NB3LE-AFD arc fault detection circuit-breaker with residual current operated function applies to circuits with frequency of 50Hz, rated voltage AC 240V, and rated current up to 32A. It provides overload, short circuit, leakage protection and arc fault detection, and can also be used for infrequent switching of the circuit under normal circumstances.

1.2 Selection

RCD type

Type A - Tripping is ensured for sinusoidal, alternating residual currents as well as for pulsed DC residual currents, whether they be quickly applied or slowly increase.

Tripping curve

B curve (3-5 I_n) protection and control of the circuits against overloads and short-circuits; protection for people and big length cables in TN and IT systems.

C curve (5-10 I_n) protection and control of the circuits against overloads and short-circuits; protection for resistive and inductive loads with low inrush current.

1.3 On-off indication

Table 1 Indicator light status display

Breaker status	Indicator light color	Instruction
'On' position	Blue always bright	Normal working
'On' after tripping	Red flashing 10s	Residual current fault
	Red and blue flashing alternately 10s	Arc fault

1.4 Certificates

CE, CB, UKCA

	Connection		Bottom electrical feeding

2.3 Temperature derating

The maximum permissible current in a circuit breaker depends on the ambient temperature where the circuit breaker is placed. Ambient temperature is the temperature inside the enclosure or switchboard in which the circuit breakers are installed.
