

# NBH8LE **Residual Current Operated Circuit Breaker** with over-current protection (Electronic)

#### 1. General

#### 1.1 Function

Personnel and fire protection Cable and line protection against overload and short-circuits.

## 1.2 Selection

 $I\Delta n = 10mA$ , 30mA: additional protection in the case of direct contact. C curve (5-10 In) protection and control of the circuits against overloads and short-circuits; protection for resistive and inductive loads with low inrush current. AC class - Tripping is ensured for sinusoidal, alternating currents, whether they be quickly applied or slowly increase.

1.3 Approvals and certificates Detailed information, please refer to Certificates Table on the last page.

## 2.3 Temperature derating

The maximum permissible current in a circuit breaker depends on the ambient temperature where the circuit breaker is placed. Ambient temperature is the temperature inside the enclosure or switchboard in which the circuit breakers are installed. The reference temperature is 30°C

Temperature	-10℃	0℃	10℃	20°C	30°C	40°C	50°C	60°C
